

420VaultBot v5.5.6 — Complete User Manual

User guide for onboarding, subscriptions, licensing, search, previews, downloads, Drive, remote sources, orders, and troubleshooting.

1. Access and onboarding

New, unverified, unpaid, and expired users can use **420_help**, **420_subscribe**, and **420_user_manual**. Paid commands remain hidden from their help view. Trying a paid command produces a not-authorized message and the subscription GUI.

2. Terms verification

Follow the server Terms channel and complete its verification interface when the Terms gate is enabled. Terms verification and paid access are separate states.

3. Subscriptions and payment

Run **420_subscribe** to open the plan GUI. Available plans and payment providers are configured by the server administrator. Manual payments require approval; configured hosted payment providers complete payment outside Discord.

4. Licenses and activation

Issued licenses are sent to the selected customer's Discord DM with an Activate License button. Normal keys use the 420V-XXXX-XXXX-XXXX format. Never post a license publicly.

5. Help behavior

420_help shows commands appropriate for the account. Restricted accounts see only help, subscribe, and user manual. Unlocked users see the normal user commands.

6. Managed Link Library

Use **420_search** with keywords to search administrator-managed link lists. Results are paginated and remain subject to server access rules.

7. Physical Vault

Use **420_vault_search** to search indexed local storage. Audio results expose Preview Audio before Download Original. Small compatible audio can play as a Discord attachment; oversized sources can use a temporary FFmpeg-generated preview when FFmpeg is installed. Folder delivery is ZIP-based when it fits the Discord upload limit.

8. Google Drive

Use **420_drive_search** to search or browse synchronized Drive metadata. Normal files can use Drive-native actions and optional Discord delivery. ZIP/RAR archives can be parsed so internal filenames become searchable; internal results map back to the complete parent archive. Drive folders can be opened or recursively packaged as a ZIP for Discord delivery when the resulting ZIP fits the server limit.

9. Remote File Server

If configured, **420_server_search** searches the remote source and exposes controlled download or preview actions according to administrator configuration.

10. Preview versus download

Preview is for listening before deciding to download the original. Previewing does not alter the source file. Download Original remains a separate action.

11. Other Vault commands

Unlocked accounts may have type, size, term, random, statistics, listing, and delivery commands. Run **420_help** while unlocked for the installed command set.

12. Orders and Order IDs

GUI-issued licenses receive an Order ID such as ORD-YYYYMMDD-XXXXXX. It links the issuance to the selected Discord customer and license and is useful when contacting support.

13. Expiration

Expired users return to restricted access. **420_help**, **420_subscribe**, and **420_user_manual** remain available so renewal is possible.

14. Troubleshooting

If a GUI expires, reopen it with its command. Offline Vault storage can remain indexed but cannot deliver files. If a Drive item is too large for Discord, use Drive-native delivery where available. If license DMs are blocked, enable server-member DMs and ask an administrator to resend.

15. Security

Do not send card details through Discord. License signing secrets, API credentials, Drive credentials, and payment credentials are server-side administrator configuration.
