

420VAULTBOT

Complete User Manual

Complete v5.8.7 reference • 20 major Discord chapters • full command and workflow coverage.

01 • Start Here

420VaultBot has four separate search sources: Managed Links (420_search), Physical Vault (420_vault_search), Google Drive (420_drive_search), and Remote Servers (420_server_search).

New/restricted users can use 420_help, 420_features, 420_subscribe, and 420_user_manual. Complete Terms verification and required paid/license access to unlock protected commands.

Chapter 1 of 20

02 • Terms & Verification

Use the server Terms panel or 420_tos. Read every Terms page, wait the configured minimum read time, then take the knowledge check. Each attempt samples five questions from the question bank and randomizes answer order. After passing, press ****Accept Terms & Verify**** so the bot can assign the configured roles and save acceptance for the current Terms version.

Chapter 2 of 20

03 • Plans & Payments

Run 420_subscribe. Default plans are 1 Month \$25, 3 Months \$75, 6 Months \$100, 1 Year \$150, 2 Years \$200, 3 Years \$250, Lifetime \$500. Admins can change these values. Cash App/manual payments require approval; Stripe and PayPal use hosted provider flows when enabled.

Chapter 3 of 20

04 • Licenses

There is no text activation command. A generated license is delivered through Discord UI, normally by DM, with an Activate License button. The configured license channel can also host the persistent activation panel. Do not post license codes publicly. Expired/revoked access returns ordinary users to restricted state.

Chapter 4 of 20

05 • Feature Stats

Run `420_features` to see the bot's major features plus current Physical Vault file count/size, Google Drive indexed file count/size, and total unique Link Library count. This is useful for seeing the scale of the server without opening the Admin GUI.

Chapter 5 of 20

06 • Link Search

420_search <query> searches the unified Link Library and opens browser-style preview cards. 420_searchkit is an alias. Results combine bundled legacy lists, managed imports, and scraper-created links_part_N.txt parts. Duplicate URLs are normalized/deduplicated. Previous/Next paginate the result set.

Chapter 6 of 20

07 • Search by Site

Use `420_search_site example.com serum` to search only links hosted by `example.com` (including its subdomains) while also matching `serum`. You can also type `site:example.com serum` directly into normal `420_search`. Use `site:example.com` alone to browse matches from that site.

Chapter 7 of 20

08 • Physical Vault

420_vault_search <query> searches the persistent local/external-drive index. The drive is not rescanned for every search. Results include files, presets, archives, projects, and other indexed production assets. If storage is temporarily offline, metadata can remain indexed while delivery waits for the drive to return.

Chapter 8 of 20

09 • WAV/MP3 Audition

Only .wav and .mp3 are treated as playable audio. Selecting an audio result requests a Discord audio player so you can audition before choosing the original download. Discord controls the Play action and does not allow bots to force autoplay. .fst and other preset formats are not audio and remain normal downloadable files.

Chapter 9 of 20

10 • Google Drive

420_drive_search opens the configured Google Drive browser. The bot searches synchronized metadata rather than downloading the entire Drive on each query. Delivery depends on Google permissions, indexed availability, file type, and Discord upload limits. Drive-native/open-in-Drive behavior is used when appropriate.

Chapter 10 of 20

11 • Remote Servers

420_server_search opens configured remote-server results. In v5.8.7 the implemented remote source is an HTTPS JSON manifest server, optionally using a bearer token. If no server is configured or it is offline, contact an administrator.

Chapter 11 of 20

12 • Downloads & Limits

Original downloads are separate from audio auditioning. Discord delivery obeys the destination server's upload limit. Oversized local items are not silently truncated. Folder/archive operations have safety limits. Admins can disable downloads globally for the guild.

Chapter 12 of 20

13 • Troubleshooting

If a GUI belongs to someone else, run the command yourself. If a panel is stale after an update, rerun its command. Missing Vault files usually mean storage is disconnected or the index needs a scan. Missing Drive results may require a sync. If license DMs fail, enable DMs from server members and ask an admin to resend.

Chapter 13 of 20

14 • User Commands

420_help • 420_features • 420_user_manual • 420_tos • 420_search [query] • 420_search_site <site> [query] • 420_searchkit [query] • 420_vault_search [query] • 420_drive_search • 420_server_search • 420_subscribe • 420_subscription • 420_status • 420_version • 420_sendlink <query> <#channel> • Vault type/size/terms/random/stats/list/download commands.

Chapter 14 of 20

15 • Search Source Map

420_sources shows all four searchable libraries and the command used for each. This is the quickest way to understand whether a result belongs in managed links, the Physical Vault, Google Drive, or a configured remote server.

Chapter 15 of 20

16 • Library Statistics

420_features shows the complete capability card plus live totals. 420_vault_info focuses on Physical Vault file count, indexed size and file types. 420_drive_info shows indexed Drive files and size. 420_links_stats shows the deduplicated searchable link total and managed database count.

Chapter 16 of 20

17 • Link Search Examples

Examples: 420_search serum, 420_search site:example.com serum, 420_search_site example.com serum, or 420_search site:example.com to browse a domain. Domain filtering includes subdomains. Search results are still subject to configured channel/access restrictions.

Chapter 17 of 20

18 • Audio vs Original Files

Auditioning is for deciding whether a WAV/MP3 is useful before obtaining the original. The original Vault file is not replaced by the preview. Non-audio assets remain downloadable/searchable without pretending they are playable.

Chapter 18 of 20

19 • Access Troubleshooting

If 420_help only shows a few commands, your account is in restricted mode. Complete the current Terms flow and the required subscription/license activation, or contact an administrator if you were intentionally granted access. Beta Tester policy can bypass payment but not Terms when Terms is enabled.

Chapter 19 of 20

20 • Full User Command Directory

Core: 420_help, 420_features, 420_sources, 420_user_manual, 420_status, 420_version. Links: 420_search, 420_search_site, 420_searchkit, 420_links_stats, 420_sendlink. Vault: 420_vault_search, 420_vault_info, type/size/terms/random/stats/list/download. Cloud/remote: 420_drive_search, 420_drive_info, 420_server_search. Access: 420_tos, 420_subscribe, 420_subscription.
