

420VAULTBOT

Complete User Manual

v5.8.8 moves feature statistics, site filtering, and major administration controls into Discord GUIs. Use 420_features for the Feature Center and 420_admin for the full operator dashboard.

01 • Start Here

420VaultBot has four separate search sources: Managed Links (``420_search``), Physical Vault (``420_vault_search``), Google Drive (``420_drive_search``), and Remote Servers (``420_server_search``).

New/restricted users can use ``420_help``, ``420_features``, ``420_subscribe``, and ``420_user_manual``. Complete Terms verification and required paid/license access to unlock protected commands.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

02 • Terms & Verification

Use the server Terms panel or `420\_tos`. Read every Terms page, wait the configured minimum read time, then take the knowledge check. Each attempt samples five questions from the question bank and randomizes answer order. After passing, press ****Accept Terms & Verify**** so the bot can assign the configured roles and save acceptance for the current Terms version.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

03 • Plans & Payments

Run ``420_subscribe``. Default plans are 1 Month \$25, 3 Months \$75, 6 Months \$100, 1 Year \$150, 2 Years \$200, 3 Years \$250, Lifetime \$500. Admins can change these values. Cash App/manual payments require approval; Stripe and PayPal use hosted provider flows when enabled.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

04 • Licenses

There is no text activation command. A generated license is delivered through Discord UI, normally by DM, with an Activate License button. The configured license channel can also host the persistent activation panel. Do not post license codes publicly. Expired/revoked access returns ordinary users to restricted state.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

05 • Feature Stats

Open `420\_features` to launch the **Feature Center GUI** and see the bot's major features plus current Physical Vault file count/size, Google Drive indexed file count/size, and total unique Link Library count. This is useful for seeing the scale of the server without opening the Admin GUI.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

06 • Link Search

``420_search <query>`` searches the unified Link Library and opens browser-style preview cards.

``420_searchkit`` is an alias. Results combine bundled legacy lists, managed imports, and scraper-created ``links_part_N.txt`` parts. Duplicate URLs are normalized/deduplicated. Previous/Next paginate the result set.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

07 • Search by Site

Open the normal `420\_search` browser and press ****Search by Site****, or open `420\_features` and press ****Search by Site**** there. Enter the domain and optional keywords in the GUI. Domain matching includes subdomains.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

08 • Physical Vault

``420_vault_search <query>`` searches the persistent local/external-drive index. The drive is not rescanned for every search. Results include files, presets, archives, projects, and other indexed production assets. If storage is temporarily offline, metadata can remain indexed while delivery waits for the drive to return.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

09 • WAV/MP3 Audition

Only `.wav`` and `.mp3`` are treated as playable audio. Selecting an audio result requests a Discord audio player so you can audition before choosing the original download. Discord controls the Play action and does not allow bots to force autoplay. `.fst`` and other preset formats are not audio and remain normal downloadable files.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

10 • Google Drive

`420\_drive\_search` opens the configured Google Drive browser. The bot searches synchronized metadata rather than downloading the entire Drive on each query. Delivery depends on Google permissions, indexed availability, file type, and Discord upload limits. Drive-native/open-in-Drive behavior is used when appropriate.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

11 • Remote Servers

`420\_server\_search` opens configured remote-server results. In v5.8.8 the implemented remote source is an HTTPS JSON manifest server, optionally using a bearer token. If no server is configured or it is offline, contact an administrator.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

12 • Downloads & Limits

Original downloads are separate from audio auditioning. Discord delivery obeys the destination server's upload limit. Oversized local items are not silently truncated. Folder/archive operations have safety limits. Admins can disable downloads globally for the guild.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

13 • Troubleshooting

If a GUI belongs to someone else, run the command yourself. If a panel is stale after an update, rerun its command. Missing Vault files usually mean storage is disconnected or the index needs a scan. Missing Drive results may require a sync. If license DMs fail, enable DMs from server members and ask an admin to resend.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

14 • User Commands

Core commands stay compact: `420\_help`, `420\_features`, `420\_user\_manual`, `420\_search`, `420\_vault\_search`, `420\_drive\_search`, `420\_server\_search`, `420\_subscribe`, `420\_subscription`, `420\_status`, `420\_version`, plus legacy Vault/sendlink utilities. Feature totals and site search are buttons inside the GUIs rather than extra commands.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

15 • Search Source Map

`420\_sources` shows all four searchable libraries and the command used for each. This is the quickest way to understand whether a result belongs in managed links, the Physical Vault, Google Drive, or a configured remote server.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

16 • Library Statistics

`420\_features` opens the Feature Center GUI. Its main card shows Physical Vault file count/size/types, Google Drive indexed file count/size, and the deduplicated Link Library total in one place. Use ****Refresh Stats**** to update it.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

17 • Link Search Examples

Run ``420_search`` and use ****Search**** for a normal query or ****Search by Site**** for a domain plus optional keywords. The Feature Center GUI also has both entry points. Domain filtering includes subdomains.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

18 • Audio vs Original Files

Auditioning is for deciding whether a WAV/MP3 is useful before obtaining the original. The original Vault file is not replaced by the preview. Non-audio assets remain downloadable/searchable without pretending they are playable.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

19 • Access Troubleshooting

If ``420_help`` only shows a few commands, your account is in restricted mode. Complete the current Terms flow and the required subscription/license activation, or contact an administrator if you were intentionally granted access. Beta Tester policy can bypass payment but not Terms when Terms is enabled.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.

20 • Full User Command Directory

Core: `420\_help`, `420\_features`, `420\_user\_manual`, `420\_status`, `420\_version`. Links: `420\_search`/`420\_searchkit`, `420\_sendlink`; site filtering is a GUI button. Vault: `420\_vault\_search` plus legacy type/size/terms/random/stats/list/download utilities. Cloud/remote: `420\_drive\_search`, `420\_server\_search`. Access: `420\_tos`, `420\_subscribe`, `420\_subscription`.

GUI-first note: use the relevant button/menu in the Feature Center, Search Browser, or Admin Dashboard whenever this chapter describes a configurable feature.
